The software interface: This program is named after the City of Los Angeles's Department of Watersheds and Sanitation, but Photoshop has become the world's most popular graphics software. It may not be the most intuitive or user-friendly program on the market, but it still has a wide range of tools, even for those who are new to design or those who lack a design background. **Transparency:** In the Layers panel, you can choose to see the layers as they were created or as they appear after being edited. **Layer masks:** The Layers panel has a very useful feature, called a layer mask, that enables you to draw on a layer and mask its parts. You can reduce transparency wherever you draw and choose to apply the mask either to the layer or a copy of it. Use this tool to colorize, brighten, or otherwise modify a single area of your image. **Cloning:** Clone is a useful tool that creates a duplicate of your original layer or image with different blending modes, transparency, or color. **Crop:** Crop is a tool that enables you to draw a rectangular selection box over an area of an image and remove any part you don't need. You can then paste your selection into a new file. **Channels:** Channels are settings that you can use to create and edit a specific color in an image. You can use a layer of its own to customize the channel of the selected area, meaning you can remove all colors other than a specific one. You can also use channels to turn selected portions of a layer black and white or grayscale. **Gradients:** Gradients are still one of the best tools to achieve a specific effect. You can have several such layers and merge them to create complex, customized gradients that work well in your image. # NOTE The basic Photoshop version you buy from Adobe includes these features (and many more): **Text tools:** The text tool enables you to do just about anything you can with letters. You can make them bigger or smaller, color them, make them bold, italicize, or use a distinctive font family. **Grid/polar grid:** With the grid tool, you can create a row or column, or grid system, that enables you to arrange image elements more easily. With the polar grid

Looking for a quality custom skydiving suit for just \$375 and it was a steal! I had no idea this suit would be so incredible. The suit, made by Italian brand, Parajumpers, was a prototype recently and has already won the Aero Award - it is a short category of the 6th International Conference in Leipzig. This suit is a one-piece suit made of military-grade nylon and Lycra (regular polyester) that can't be found in other sky diving suits. It is true to my size and has a removable, high-tech, two-way compression system with adjustable panels. There is an invisible vest underneath, so you won't have to worry about it flying up your nose. Parajumpers is also the leader in preventing draft from entering the suit, which results in an air tight fit. You can order this suit on a pay-per-use basis (or just wear it all the time if you like it so much!) — I was shocked when I saw my new suit. It is more like a normal suit, so much so that I use my regular clothes and shoes to set it apart. The synthetic material makes the suit very comfortable and the compression in the arms and chest gives me a tighter, more voluminous look than the wide-leg, cargo/ski style. The buttons on the collar and shoulders can be adjusted to fit the size of the jumper's neck - there is also a non-slip grip on them. The waist has four sets of elastic and Velcro in it, which you can tighten or loosen depending on how tight or loose you like the fit. These Parajumpers have a hood with buckled strings (my previous suit didn't have them) and a skirt that you can pull down to cover your lower legs. The waist of the suit is rib-knit, which gives it a tighter look than the smooth unribbed material in the prototype. The pants have two layers to make it more durable. The only problem I had was that the material was a little stiff and I prefer the padding and venting found in the prototype. If you think this suit looks awesome and want a similar style, all you have to do is upload an image to the Parajumpers website, and the company will send it to you as a mock-up. After you send

Brushes Brushes are one of the most-used tools in Photoshop. They're designed to mimic the way artists have traditionally used them, with the "drag and flick" method of painting on a canvas. They let you paint in any color and shape. You can use one of the predefined Brushes, or create your own from scratch. When you create your own brushes, you can use any shape and size. You can even assign a single stroke to any of the tools, so you can paint in multiple colors at once. **Create Brushes:** When you create a new brush from scratch, the Brush Tool (B) is highlighted in the Tools panel. To make a brush, choose New Brush from the Brush menu in the Tools panel, select "Brush Settings," and click the Brush Settings button. Then you'll see the Brush Settings dialog box that looks something like this. The Brush Settings dialog box is divided into three sections: Settings, Samples, and Options. Settings are the settings that control how the brush behaves. The four most important settings are: Opacity, Size, Spacing, and Falloff. **Opacity:** This settings controls how transparent the stroke will be. Brushes with a lower Opacity will let you see the base color through the stroke. Brushes with a higher Opacity will let you paint over a darker layer of the base color. Setting Opacity to 100% will leave your brushstroke completely opaque, allowing you to paint over any pixels and blend them into the original layer. **Size:** The Size setting defines the size of the pixels that will be used to make the brushstroke. Changing this setting only changes the stroke size; it doesn't create a new stroke. Size is measured in pixels. Smaller sizes create smaller strokes, and larger sizes create larger strokes. Brushes that have a Size of 0 are shown as thin lines (16 pixels wide) at the size of the current layer. A Size of 100 creates a thick line (128 pixels wide) at the size of the current layer. **Spacing:** Changing the Spacing setting defines the space between each pixel in your stroke. Smaller Spacing values will place pixels closer together, and a larger Spacing value will space the pixels out farther apart. If your brush is different from the example above, this setting will change the size of each individual pixel, rather than the stroke size. **Falloff:** The Falloff setting controls
